PROFESSIONAL SUMMARY

Computer Science undergraduate at NUS with hands-on experience building and deploying automation systems in government and enterprise environments. Strong foundation in software engineering, data structures, and workflow automation, with proven impact reducing manual operations at scale.

EDUCATION

Bachelor Of Computer Science **2024 - 2028**
National University of Singapore Singapore

A Levels – 87.5 RP **2020 - 2021**
Anderson Serangoon Junior College Singapore

WORK EXPERIENCE

Operations Engineer **Dec 2023 – Jul 2024**
Liberty Specialty Markets Singapore

- Developed Python automation scripts to process GST rate changes in invoices, improving data accuracy and ensuring regulatory compliance during system-wide tax updates.
- Automated daily debt checks using Excel VBA, reducing manual reconciliation effort and improving operational turnaround time.

Administrative Assistant (CFC) **Oct 2022 – Nov 2023**
Ministry Of Defence Singapore

- Led the design and implementation of an automated account registration system within SAF infrastructure, replacing a manual workflow and reducing administrative workload by 80%.
- Debugged and optimized workflows to ensure reliability and smooth system rollout.

PROJECTS

NUS Hack & Roll 2026 **Jan 2026 – Jan 2026**

- Developed Flappy Bird–style game infused with gacha mechanics using Unity and C#, integrating gameplay logic with randomized reward systems under hackathon time constraints.

DSTA BrainHack Finalist **Dec 2025 – Dec 2025**

- Collaborated in cross-functional teams to design and prototype technical solutions under time constraints, contributing to system logic and implementation.
- Presented project outcomes to judges and mentors, clearly explaining technical decisions, trade-offs, and potential real-world impact.
- Achieved Finalist / Top 8 placements amongst over 100+ competitors.

NUS Orbital CP2106 – Unity Game Development | C#, Unity **May 2025 – Aug 2025**

- Developed a 3D endless runner game using Unity and C#, owning core gameplay mechanics such as player movement, obstacle spawning, and scoring logic.
- Applied object-oriented design principles to structure reusable components, improving maintainability and scalability of game features.
- Worked in a two-person development team, coordinating tasks, reviewing code, and presenting progress milestones as part of the Orbital evaluation process.

TECHNICAL SKILLS

Languages | Python, JavaScript, Java, C/C++, SQL, C#, Excel VBA, HTML/CSS
Frameworks | React, Node.js, Next.js, Flask
Developer Tools | Git, GitHub, Visual Studio Code, PyCharm, IntelliJ IDEA, Unity Editor, Docker, PostgreSQL
Libraries | Pandas, NumPy
